

# Welcome to Creative Community Computing!

Creative Community Computing (CCC) is a series of workshops where you get hands on real world experience with taking apart, breaking and fixing computer hardware.

Then you'll create your own custom-built computer operating system, using free software you have chosen and installed yourself.

At the end of the series not only will you have the skills and knowledge to repair and upgrade everything inside your computer, you get to take the computer home. It's yours to keep!

CCC assumes no prior knowledge of computer hardware, and begins with the basics of computer software using clear, simple language.

This program was developed for use at the State Library of Queensland and delivered regionally across Queensland. All original material is released under a creative commons share-alike non-commercial license.

## About this wiki

This section of the CCC website is a *wiki*. A wiki is a website which allows people to create and edit content and structure directly from the web browser.

This wiki is your complete resource for the CCC workshop program. It contains the workshop guidelines and other resources to help you complete the CCC program.

We've tried to define all jargon and acronyms either in the text or with links to [Simple Wikipedia](#). Simple Wikipedia is a smaller, less technical version of the main wikipedia site.

However, if anything is still confusing we have not done our job properly so do ask your facilitator to clarify and we'll do our best.

## Train The Trainer

This wiki is also the main resource for the Train the Trainer series of workshops run in 2015-2016 in rural Queensland, Australia.

If you followed the Train the Trainer series you will be equipped and trained with the tools we use to set up and run CCC workshops.

The Train the Trainer menu is then accessible from the left sidebar. Here you'll find all the facilitation tips, additional information for running the program and how to develop your own workshops.

## Offline Workshops

For workshop venues with limited internet access we run a offline local area network ([LAN](#)).

It is available during the workshop on your computers after Workshop 03. You can also access it via your phone or tablet on the wifi network 'ccc'.

For these workshops we have made local copies of useful links where we can (subject to licenses) and there is also a local version of [simple.wikipedia](#).

## Getting around the wiki

On the top left of the screen is a sidebar menu. You can find the main pages of the wiki here.

Getting around the wiki

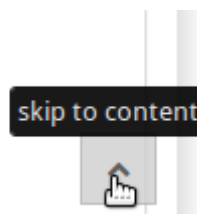

From the 'page tools' menu on the right hand side you can use the 'Export to PDF' to create a pdf document of the current page ready for print.

To create a document you can use in Microsoft Word, try the ODT Export button.

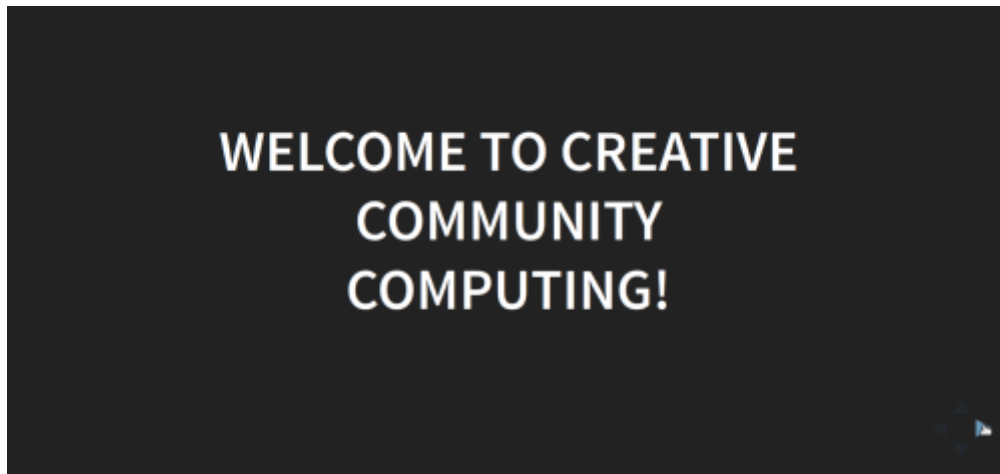

On the bottom Right of each page is a 'back to contents' button, which returns you to the top of the page.

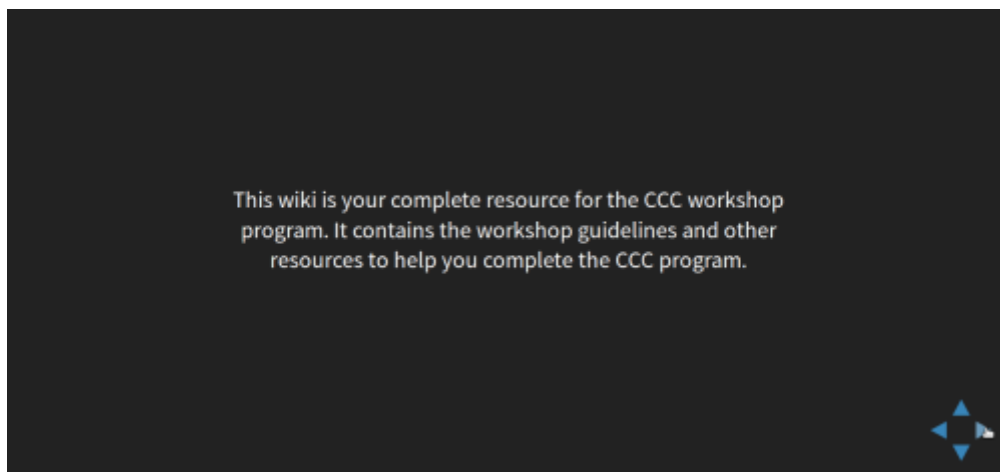

## Using the Slide Show

There is a button  at the top right which will open a slide show in a new tab.

Think of this slide show as a simple presentation of the pages content, rather than a normal slide show.

Use the arrow buttons or keys on your keyboard to navigate the slideshow.

To see an overview of the whole slideshow, use the 'esc' key.
